DDT, a chemical which kills insects, has been sprayed on the walls of your home.

•

This folder tells you how the spray keeps you from getting MALARIA by killing the mosquito which carries this disease.

DDT will not make mosquitoes disappear or keep them from coming into your home.

•

But any mosquito which comes in and rests on walls that have been sprayed will be killed.

GPO 16—43924-1

When ***DDT*** spray is first put on the walls, insects which touch it are killed very quickly.

•

After a time this spray works slower; any insect which has rested on these walls will die, but not so quickly.

Stay indoors at night
That is when malaria skeeters bite

•

But ***DDT*** upon your wall
will kill them if they call
